Jean, R., and Reverdin, D.
THE TOTAL COUPLING SWITCH TUBE (Le Tube de Commutation à Couplage Total). Aug 58 [46]p. 8 refs. Order from SLA mi$3.30, ph$7.80 61-10417

Trans. of Annales de Radioélectricité (France) 1956, v. 11, no. 44, p. 165-183.

The principle of the new TR tube, denominated total coupling tube, is based on the use of a total coupling directional window located in the side of the wave guide connecting the radar transmitter to its aerial, this window being ionized by the high UHF power at each transmitted pulse. When an echo is received all of the power coming from the antenna passes through the total coupling window into the auxiliary guide towards the receiver. The high power and low power operation of the tube described is treated on the basis of theoretical and experimental data. The essential characteristics of a total coupling tube in the 3 cm band are its pass-band (8 600 to 9 500 Mc/s), its insertion loss (0.7 db

Jeanprost, Charles.
PROCESS OF SEPARATING SALTS AND THEIR MIXTURES. [1963] 2p.
Order from OTS or SLA $1.10 63-14516

Trans. of French patent 669,100, appl. 24 Apr 28, pub. 12 Nov 29.

DESCRIPTORS: *Salts, Material separation, *Flotation (Separation), *Nitrates, *Chlorides, *Sulfates, Mixtures.

The invention concerns the use of a saturated solution of the soluble part of a mixture to be treated as a medium permitting the separation into several parts of the said mixture introduced in a state of suspension into the solution; the said separation being effectuated by means of a physical-chemical process. (Relative or absolute floatability with or without reagents, conductibility, permeability and dielectric power). (Author)

Jebsen-Marwedel, Hans.
TWO LAYER GLAZES IN CERAMICS AND ENAMELING AS ANALOGUES TO MATERIAL INTERCHANGE PROCESSES AT THE SURFACES OF INHOMOGENEOUS GLASS MELTS [Keramische und Emailtechnische Zweischichtglasuren als Analogon zu Substanzwechselvorgängen an der Oberfläche Inhomogener Glasschmelzen]. [1960] [25]p. 15 refs. Order from SLA mi$2.70, ph$4.80 61-10507

Trans. of Glastechnische Berichte (West Germany) 1958, v. 31, no. 11, p. 431-438.

It is shown that surface energy processes which take place at the surfaces of glass melts greatly affect the material interchange. They occur in an analogous way in ceramic two layer glazes, and in enameling, and thus afford an explanation for certain decorative effects as well as for the troublesome effect of a gas phase in the form of bubbles within the glaze or enamel layers. The analogy of the two fields affords (Materials--Ceramics, TT, v. 5, no. 8) (over)

Jebsen-Marwedel, H. and Dinger, K.
IMPORTANCE OF SURFACE TENSION IN THE MELTING OF GLASS (Role de la Tension Superficielle dans la Fusion du Verre). [1960] [18]p. (foreign test included) 10 refs.
Order from SLA mi$2. 40, ph$3. 30 60-18772

Trans. of Institut du Verre. Bulletin (France) 1946, no. 5, p. 15-21.

Tests show that the disappearance of the striae of lower tension than that of the surrounding medium as well as the existence of defects in the boundary surfaces are due to the surface tension. A cullet of a higher surface tension than that of the composition glass should not be used when melting glass. The considerable influence is shown of the reducing atmosphere of the furnaces on the surface tension of the vitreous mass and on the displacement of the layers, by which it is possible in the manufacture of amber yellow glass, to obtain a regular coloration.
